Diploma in Computer and Multimedia Development / [ISTA ntic Hay Riad](#) Rabat

From September 2017 to July 2019

Specialized technician in web development and graphic designer

Physical Sciences / [Mohammed VI High School](#) Salé Al Jadida

From September 2015 to June 2016

Work experience

Chief Service / [Fondation Cheikh Zaid](#) Rabat

Since June 2021

At the beginning of June I became chief service of the university solution with one more application (Symfony 4.0) which was only 50% built and I continue construction. This is my fourth web application in total, the application allows students of all training to access and prepare for the exam through a multiple choice system with correction at the end and they can also take exams online or take tests. the application had three main interfaces first one for the team that manages all the questions, one for the teachers they can get pdf extractions and add the correction for these questions, and the main part the students who have interfaces for history, exams, preparation, and mock exams.

Developer / [Fondation Cheikh Zaid](#) Rabat

From November 2020 to June 2021

At the beginning of November I received my contract to start working seriously, they gave me two other web applications. the first an application (Symfony 3.4) that allows students to connect is to fill in the internship reports that do it at the hospital and at the end of each month the admin can download all the reports. The second application (Symfony 4.0) was a website for students to review all the courses they missed, view grades, and submit reclamations. For more details visit my portfolio

Internship / [Fondation Cheikh Zaid](#) Rabat

From September 2020 to November 2020

I had the main application the university use for manage students, inscriptions, notes, payments, diplomes, planifications of the courses teachers and more, it work with php native.

Work experience

Internship / IHM Technologies Rabat

From February 2019 to March 2019

It was my first experience in building web applications. In this internship I created an application that manages all the program licenses. I used for the backend php native, for the frontend html bootstrap and js.
